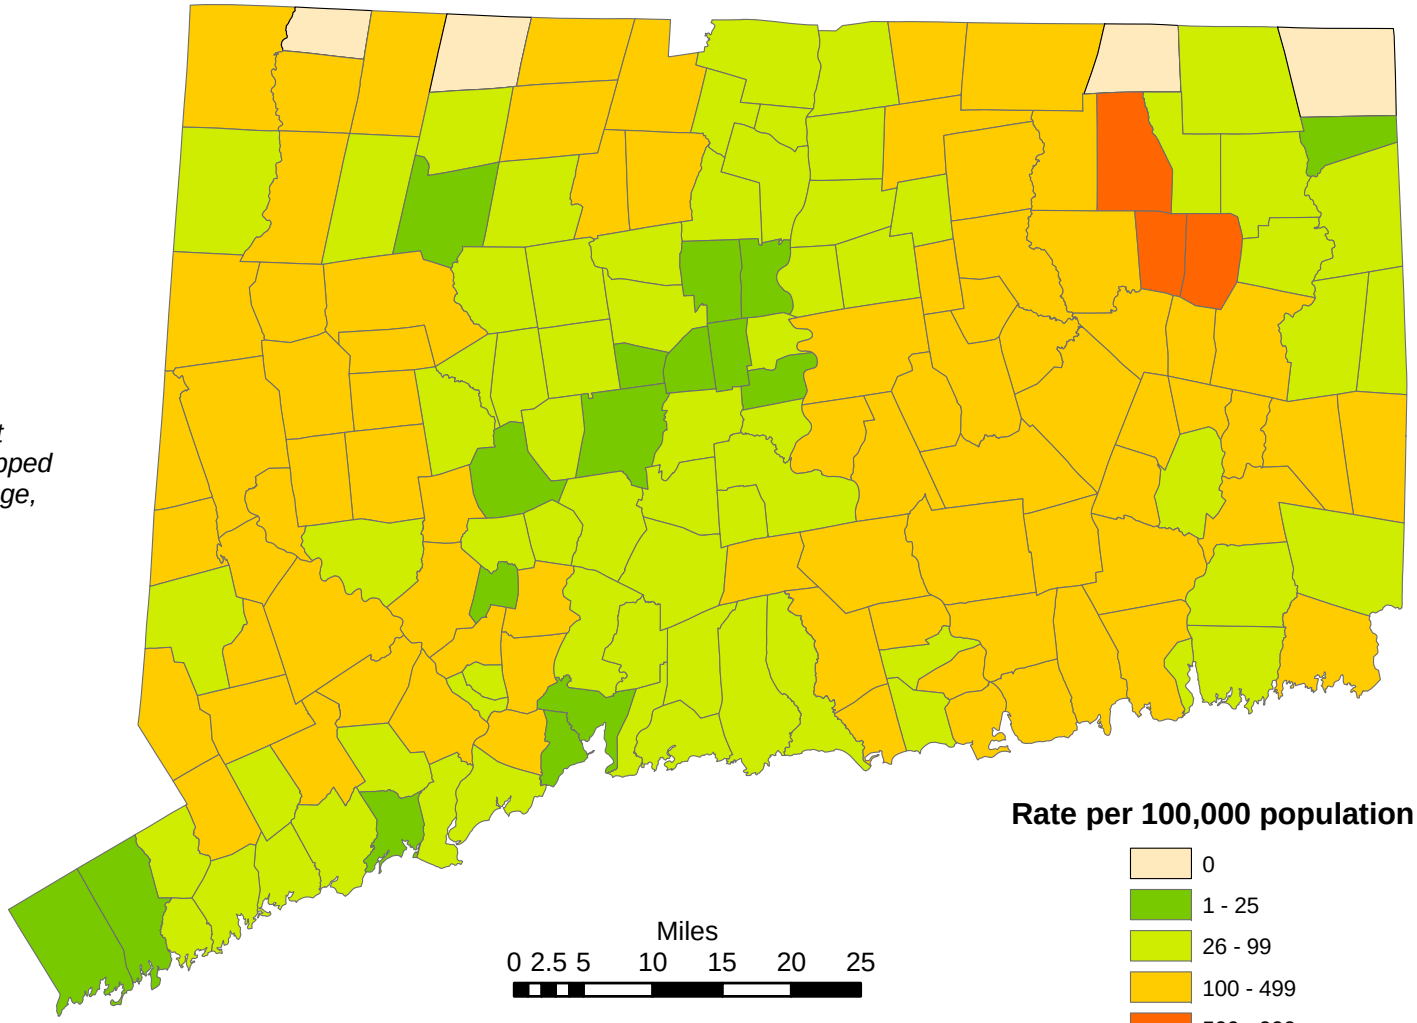
Lyme Disease Incidence by Town
Connecticut, 2008

This map was produced using annual Lyme disease surveillance data collected by the Connecticut Department of Public Health, Epidemiology and Emerging Infections Program.

Legend classes used are consistent through each surveillance year. Mapped classes correlate with incidence range, therefore some colors may not be provided on the map.



Due to a change in the 2008 national surveillance case definition, this map includes a combinded incidence of confirmed and probable cases.
