Subject: Application to Connecticut Siting Council – Watertown Renewable Power Project

Dear Watertown Community Stakeholder:

Tamarack Energy, Inc., on behalf of Watertown Renewable Power, LLC, is pleased to announce the filing of its application to the Connecticut Siting Council for the construction and operation of a 30 megawatt (MW) biomass gasification energy generating facility on Echo Lake Road in Watertown, Connecticut. The Siting Council process, which evaluates the public need and environmental compatibility of the proposed project, may include a public hearing, notice of which will be issued separately.

The Watertown Facility will convert clean wood chips into 30 MW of electricity, utilizing indigenous resources to provide clean, renewable power and local economic benefit. As a product of the Connecticut Clean Energy Fund's Project 100 program, the Watertown Facility will help meet Connecticut's growing need for homegrown, renewable energy while helping to combat the effects of global climate change.

Copies of the full application will be made publicly available at the Watertown Library at 470 Main Street, the Oakville Library Branch at 55 Davis Street, and also on the Siting Council's website ([www.ct.gov/csc](http://www.ct.gov/csc)).

We look forward to working with you and the Watertown community in the continued development of this exciting project.

Sincerely yours,  
TAMARACK ENERGY, INC.
