

Propelled Objects

Projectiles—guided missiles and similar flying toys—can be turned into weapons and can injure eyes in particular. Children should never be allowed to play with adult lawn darts or other hobby or sporting equipment that have sharp points. Arrows or darts used by children should have soft cork tips, rubber suction cups or other protective tips intended to prevent injury. Check to be sure the tips are secure. Avoid buying any dart gun or other toy which might be capable of firing articles not intended for use in the toy, such as pencils or nails.

Every Toy is Not For Every Child

Keep toys designed for older children out of the hands of little ones. Follow labels that give age recommendations—some toys are recommended only for older children because they may be hazardous in the hands of a younger child. Teach older children to help keep their toys away from younger brothers and sisters.

Even balloons, when uninflated or broken, can choke or suffocate if young children try to swallow them. More children have suffocated on uninflated balloons and pieces of broken balloons than on any other type of toy.

Electric Toys

Electric toys that are misused, or improperly assembled or wired, can shock or burn. Electric toys must meet mandatory requirements for maximum surface temperatures, electrical construction and prominent warning labels. Toys with heating elements are recommended only for children over eight years old. Children should be taught to use electric toys properly, cautiously and under adult supervision.

Infant Toys

Rattles, squeeze toys, and teethingers should be large enough so that they cannot enter and become lodged in an infant's throat.

Protecting children from unsafe toys is everyone's responsibility. Careful toy selection and proper supervision of children at play is — and always will be — the best way to protect children from toy-related injuries.

Toy Safety: For Kids' Sake

STATE OF CONNECTICUT

M. Jodi Reil, GOVERNOR

Jerry Farrell, Jr., COMMISSIONER

Buying toys

Choose toys with care. Keep in mind the child's age, interests and skill level.

Look for quality design and construction in all toys for all ages.

Make sure that all directions or instructions are clear—to you, and when appropriate, to the child.

Plastic wrappings on the toys should be discarded at once before they become deadly playthings.

Look on the label for, and follow, age recommendations, such as “Not recommended for children under three.”

Look for other safety labels including: “Flame retardant/Flame resistant” on fabric products, and “Washable/hygienic materials” on stuffed toys and dolls.

Taking care of toys

Adults should periodically check all children's toys for breakage and potential hazards. A damaged or dangerous toy should be thrown away or repaired immediately.

Edges on wooden toys that have become sharp, or surfaces covered with splinters should be sanded smooth. When repainting toys and toy boxes, Avoid using leftover paint unless it was purchased recently, since older paints may contain lead. Examine all outdoor toys regularly for rust or weak parts that could become hazardous.

Storing toys

Teach children to put their toys safely away on shelves or in a toy chest after playing to prevent trips and falls.

Toy boxes, too, should be checked for safety. Use a toy chest that has a lid that will stay open in any position to which it is raised, and will not fall unexpectedly on a child. For extra safety, be sure there are ventilation holes in the box.

Watch for sharp edges that could cut and hinges that could pinch. Be sure that toys used outdoors are put away properly after play-time— rain or dew can rust or damage a variety of toys and toy parts, creating hazards.

Sharp Edges

New toys intended for children under eight years of age should, by regulation, be free of sharp glass and metal edges. With use, however, older toys may break, exposing cutting edges.

Small Parts

Older toys can break to reveal parts that are small enough to be swallowed or to become lodged in a child's windpipe, ears or nose. The law bans small parts in new toys intended for children under three. This includes removable small eyes and noses on stuffed toys and dolls, and small, removable squeakers on squeeze toys.

Sharp Points

Toys which have been broken may have dangerous points or prongs. Stuffed toys may have wires inside the toy which could cut or stab if they become exposed. Sharp points in new toys and other articles intended for use by children under eight years of age are prohibited

Toy caps and some noisemaking guns and other toys can produce sounds at noise levels that can damage hearing. The law requires the following label on boxes of caps producing noise above a certain level: “WARNING—Do not fire closer than one foot to the ear. Do not use indoors.” Caps producing noise that can injure a child's hearing are banned.

Cords And Strings

Toys with long strings or cords are dangerous for infants and very young children. The cords may become wrapped around an infant's neck, causing strangulation. Never hang toys with long strings, cords, loops, or ribbons in cribs or playpens where children can become entangled. Remove crib gyms from the crib when the child can pull up on hands and knees; some children have strangled when they fell across crib gyms stretched across the crib.
